

CUSTOM TUNING CHARTS

Sometime you will find that there are times when you need to use a different vent than the one that is specified in the enclosure recommendations. The Custom tuning chart can be used to adjust the vent diameter and length to give you a tuning frequency for the given box volume and filling requirements.

To use the Custom Tuning Chart, locate the enclosure volume you desire and find the row corresponding to the tuning frequency you are trying to match. Be sure that the enclosure volume that you are attempting to "tune" is compensated for vent displacement and driver volume.

The Custom tuning charts have been organized into two groups: lined and unlined. The lined tuning configurations are based on fill of 30%. If you want to build one of the enclosures in the recommendations and you don't want to use stuffing, cross-reference the recommended tuning frequency with the unlined Custom Tuning Chart for the given enclosure volume. This will give the the dimensions needed to modify the tuning recommendations to work in the un-filled enclosure. Multiple different vent configuration are provided using standard inside dimensions for ABS tubing. If square vents are going to be used, try to align the surface area of the square port with the equivalent ABS throat area.
